

Type II ventilation hoods for PizzaMaster® ovens.

North American Kitchen Solutions hoods are now engineered for PizzaMaster ovens.

PizzaMaster USA is now stocking and selling NAKS (North American Kitchen Solutions) Type II ventilation hoods, purpose-built to complement PizzaMaster electric deck ovens. Whether you add a hood at the time of oven purchase or return for one later, we have the right solution in inventory. Because PizzaMaster ovens are EPA 202 Ventless Rated, they require only a Type II exhaust hood — no Type I Ansul fire suppression system — making NAKS the cost-effective, code-compliant ventilation solution.

Why NAKS Type II Hoods?

Cook line hood space is premium real estate.

Full Type I cook line hoods are a major investment and the space beneath them is valuable. A NAKS Type II hood mounts directly onto the PizzaMaster oven, freeing that prime space for other cooking equipment.

EPA 202 Ventless Rated with no Ansul system required.*

PizzaMaster electric ovens do not produce the grease-laden vapors that trigger Type I fire suppression requirements. A Type II exhaust hood is all that's needed for a fully code-compliant installation.

Total flexibility in oven placement.

Because the NAKS hood sits directly on the oven, operators can position the PizzaMaster independently wherever the kitchen layout calls for it.

Cost-effective and fully functional.

NAKS Type II hoods are built from commercial-grade stainless steel and matched by series to specific PizzaMaster oven models to deliver proper exhaust, correct capture velocity, and code compliance without the complexity or cost of a full cook line ventilation system.

Contact a PizzaMaster expert to walk you through an ideal NAKS hood for specific oven models and kitchen needs. Call us at **800-976-6762** or email **info@pizzamaster.us**.

Available hood models and compatible PizzaMaster ovens.
